

WIRELESS WALL SWITCH

SIMPLE CONTROL FOR KONEX ENABLED FIXTURES AND RELAY POWER PACKS

The ESL Vision wireless switch allows the user to control dimming and kelvin tunability with a simple press of a button. The ESL-KNX-3BS is designed to replace the existing switch increasing the performance with no wiring needed.

HOW IT WORKS

Using Bluetooth Technology, the Konex enabled wireless switch will connect to other Konex enabled products for networked, wireless control. The Wall Switch and any component that you want it to control must be connected to the network with the ESL Network Lighting App.

SPECTRUM SERIES FIXTURES

Spectrum Series fixtures are all integrated with Konex technology and can be operated with the wall switch. The fixtures and switch must be connected to the network with the ESL Network Lighting App.

RELAY POWER PACKS

ESL Vision uniquely offers real-time energy consumption data with Relay Power Packs that can be added to any fixture for network compatibility. The Relay Power Pack must be connected to the network with the ESL Network Lighting App to view energy consumption and to connect to the switch.

CONNECT WITH THE ESL NETWORK LIGHTING APP

The Wireless Wall Switch is connected using the ESL Network Lighting App and allows for on/off, dimming and kelvin tunability for Spectrum fixtures, or on/off and dimming for Relay Power Packs.

Occupancy and Relay Power Pack
ESL-KNX-FS7-RPP
Power Pack
ESL-KNX-RPP-003

Twist Lock installation for the Linear High Bay and Round High Bay fixtures. The Wireless Wall Switch controls on/off and dimming.

Wall Switch
ESL-KNX-3BS

Spectrum fixtures work directly with the ESL Network Lighting App. Add sensors for occupancy or daylight harvesting abilities. The Wireless Wall Switch controls on/off, dimming and kelvin.

Relay Power Pack
ESL-KNX-RPP-002

Upgrade any fixture with a Relay Power Pack for Network Lighting Control with real-time energy consumption data. The Wireless Wall Switch controls on/off and dimming.
